Greatview Aseptic Blank Fed

High quality alternative packaging material for SIG filling machines configured for combibloc formats.

To complement Greatview's established supply of roll-fed material, Greatview has developed blank-fed packaging material suitable for SIG combibloc machines. The Greatview Aseptic Blank Fed packaging material is produced in state-of-the art factories, using the same world-class raw material suppliers as our roll-fed offering.

5 sizes and 2 formats of brick shaped packages have been developed. Additional sizes, formats and opening systems suitable for SIG combibloc machines will be offered in the future.

Greatview Aseptic Blank Fed cartons are produced with the Flexo-Process print method using eco-friendly water-based inks. The décor layer is protected by an outer layer of polyethylene which both protects against scratches and creates an additional barrier between ink and consumer.
