Greatview Aseptic Roll Fed

High quality, reliable packaging material for Tetra Pak filling machines configured for Tetra Brik® Aseptic and Tetra Prisma® Aseptic

Greatview Aseptic Roll Fed packaging material can be used for the most common sizes and formats on filling machines configured for Tetra Brik® Aseptic and Tetra Prisma® Aseptic, generating very substantial savings and delivering vital negotiating power to purchasers. Our packaging material is produced in state-of-the-art factories, from world-class raw material suppliers and to the same level of quality standards, including printing, as the material from the original machine manufacturer. No compromise in quality is tolerated by Greatview or its customers.

Around the globe, competition law and national competition authorities support producers by mandating that Tetra Pak customers have a legal right to choose their packaging material supplier. Technical support, additional material and spare parts can continue to be supplied from the machine manufacturer, or from 3rd party suppliers, usually at considerable savings.

We respect and comply with all regulatory requirements and laws, including valid intellectual property rights, wherever we operate.

Greatview packaging material is compatible with the majority of Tetra Brik® Aseptic and many Tetra Prisma® Aseptic filling machine configurations, including the opening and closure devices. We encourage all customers to keep themselves informed of which systems are locked to alternative supply and which are open. For more information please contact us.

Greatview's high quality, competitive pricing and excellent service levels have generated consistent growth. The average annual sales of aseptic packaging materials exceeds 10 billion packs, sold in retailers across Europe, the Americas, China, Africa, Russia, Middle East and the Pacific. We have grown to become the largest supplier of aseptic roll fed packaging material for filling machines configured for Tetra Brik® Aseptic after Tetra Pak® itself. We supply both customers who source 100% of their packaging material from us, as well as customers who maintain dual supply and competitive tendering. Either way, Greatview Aseptic Roll-Fed material improves the competitiveness and bottom line of aseptic milk, juice and beverage producers, with no compromise on quality.
